After the August 2018 increase in Bank Rate to 0.75%, the first above 0.5% since the financial crash, the MPC has put any further action on hold, probably until such time as the fog of Brexit might clear and there is some degree of certainty of what the UK will be heading into.

The above forecast, and other comments in this report, were based on a central assumption that there will be an agreement on a reasonable form of Brexit. In view of the current, (1 April 2019), lack of any majority in the House of Commons for one option for Brexit, the above forecasts will probably need revision to take account of the current impasse if that were to continue. This could mean that the start of increases in Bank Rate may need to be pushed back.

The balance of risks to the UK

- The overall balance of risks to economic growth in the UK is probably neutral.

The balance of risks to increases in Bank Rate and shorter term PWLB rates, are probably also even and are broadly dependent on how strong GDP growth turns out, how slowly inflation pressures subside, and how quickly the Brexit negotiations move forward positively.
